Youlden, D. M., et al., Nutrition services in home health agencies, article review of, 4:29

**Information for Contributors**

**JOURNAL OF NUTRITION EDUCATION** welcomes new findings in the nutrition education field in the form of research articles, critiques or reviews applying to nutrition education and concise reports on activities or programs in this field. Articles submitted must not have been published in, or currently submitted to, any other publication. Letters to the Editor also are considered for publication.

**Articles**

Research, critique, summary, or feature articles may be from 2,000 to 4,000 words (up to 15 manuscript pages). Write the article for a general, professional audience with a minimum of technical language. Provide a short title. Summarize the article in three or four brief sentences. Insert subheads at appropriate places in the text.

Illustrations, glossy prints, charts or drawings add considerably to the interest of an article. Cite all illustrations in the text. On a separate page, provide a brief caption for the illustrations. The editors can be helpful in carefully planning a distribution of illustrations.

A research article would report on some aspect or concept of nutrition education to which analytical methods have been applied.

A critique, review or feature article should contain commentary about a subject of interest to nutrition educators and directly related to the effectiveness of the teaching.

**Activity and Program Reports**

Short reports of current programs or activities in nutrition education may vary in length up to 1,000 words (up to 4 manuscript pages), one or two illustrations, glossy prints or charts may accompany the report. These reports should include a description of the activity; an evaluation of response; recommendations of changes, if needed.

**Preparation of Manuscripts**

1. Manuscripts should be typed, double spaced, with wide margins, on 8½ x 11 inch bond paper. Type on one side of sheet only. The original and the first carbon copy should be submitted. Pages should be numbered consecutively. Do not use single-spacing anywhere. Put the name of the first author and the page number in the upper right-hand corner of every page.

2. The title page should contain title of article; author(s), position and/or title; place of origin with city and state or country (Zip code: complete address for mailing proofs).

3. Begin each major section on a new page: text, footnotes, references, bibliography, legends for charts or figures. Put each table on a separate sheet and double space. Illustrations (unmounted photographs) should be identified on the reverse with figure number and author's name(s) and title of article. Place behind the page in the text where they are first mentioned. All illustrations must be glossy prints or professional drawings in black ink. All printing should be large enough to be legible if reduction is necessary.

Pertinent illustrations, professionally prepared, are encouraged. If there are excessive illustrations or color reproductions, special arrangements must be made with the publishers. The editor reserves the right to limit the number of illustrations.

**References and Bibliography**

Authors must be responsible for the accuracy and completeness of their references.

References should be in sequence as they appear in text. The reference numbers should be placed in the text between parentheses, as (1). Each number should contain only one reference.

A Bibliography or Selected Reading may be included where the author feels it would add to the value of the article. The bibliographical references should be arranged in alphabetical order.

Each reference should contain name of author(s) with initials; title of article; name of periodical with volume, page and year. For example:

For titles of journals, follow abbreviations listed by the Chemical Abstracts Service.

In reference to book titles, the following should appear in sequence: name of author(s), title, volume number, if any, editor, editor if other than the first, publisher's name, year of publication and exact page number(s). For example:

**Reviewing Articles**

All articles will be reviewed by two consultants. They will be reviewed for reader interest, professional significance and soundness. Suggestions for revision will be submitted to the author.

**Editing**

Papers may be edited to improve readability. When editing is extensive, the paper will be returned to the author for correction and approval.

**Reprints**

Reprints are provided at cost to the author when ordered in advance of printing.
