¡Haz Espacio Para Papi! Development of a Father-focused, family-centered program to prevent obesity and strengthen families

Joseph Sharkey¹, M Renée Umstattd Meyer², Cassandra Johnson¹, Luis Gómez¹, Luz Martinez¹, Elva Beltrán⁴, and Maria Garza⁴

It is widely recognized that behavior change in children occurs within a family system. Our formative work during the program development phase utilized a mixed-methods approach to examine perspectives of children, mothers, and fathers on dietary and activity behaviors and intra-family communication and active engagement. Fig. 1 shows the sequence of activities that described the importance of engaging fathers in programs to improve family health. We describe the development and planned deployment of Familias Saludables, a skill-based curriculum that is a culturally and contextually appropriate, father-focused and family-centered. This multiple-component intervention engages Mexican-heritage fathers, mothers, and children (age 9-11 years) in an experiential, Spanish-language curriculum to enhance father-child relationships and co-parenting strategies; increase knowledge, skills, self-efficacy, and preferences regarding nutrition and physical activity; and delivers this intervention in a group setting. ¡Haz espacio para papi! (Make room for daddy!) is a game changer by engaging Mexican-heritage fathers, co-parenting couples, and children in a family-centered intervention.

- Geographical areas (Fig. 2) – 16 clusters; 6 clusters randomly identified
- Recruitment
  - Elitization survey participants provided permission to be contacted for future studies
  - 15 MI triads (father, mother, and child 9-11 y) from each of 6 clusters
- Study design
  - Stepped wedge (Fig. 3)

Intervention
- Components - Learning as a Family
  - Welcome and introduction/tasting
  - Introductory activity/Active games
  - Lesson + activities
  - Food prep/cooking
  - Physical activity break
  - Family time/eating together
  - Goal setting
  - Take-home message and wrap-up
- Sessions
  - Intervention training
  - Individual sessions
  - Family development
  - Motivational interviewing

Abstract/Summary/Statement

Method/Design

- Familias Saludables builds on years of prior descriptive work with Mexican-heritage (MH) families in Lower Rio Grande Valley colonias
- Development strategy: Design and development of components in English based on formative feedback and adaptation of existing activities; translated into Spanish by team Linguistics Core and reviewed by team promotoras to ensure semantic, conceptual, and normative equivalence
- Pretest and modification
- Formative work – two years of formative work that included ground-truthed community assessment, Spanish-language platidicas (children and mothers), Spanish-language dyadic interviews (fathers), Spanish-language elitization surveys (mothers and fathers), and monthly meetings with three community advisory boards.
- Workgroups – experienced teams with expertise in nutrition, physical activity, and family development

Acknowledgements

Familias Saludables is supported by the National Institute of Food and Agriculture, U.S. Department of Agriculture, under award number 2015-68015-73234. We extend our sincere thanks to our three community advisory boards: Progress Community Health Advisory Council; P-CHAC, Hand in Hand San Carlos (HHSC), Advisory Committee for Health and Community (CACH); and members of the Familias Saludables Linguistic Core (Tomas Johnson, Ruth Telles, Juan Ruiz, Daniela Mengoli, and Edith Valle)
