Obesity threatens US military readiness

A new Perspective published in the Journal of Nutrition Education and Behavior outlines the research and practices needed to combat the US obesity epidemic and its impact on military readiness

Philadelphia, May 6, 2022 – Obesity is recognized as a public health crisis with serious medical and economic effects, but a [Perspective](#) in the [Journal of Nutrition Education and Behavior](#), published by Elsevier, outlines how obesity's consequences also impact the US military.

"This is a complex problem that has a deep impact on national security by limiting the number of available recruits, decreasing re-enlistment candidacy, and potentially reducing mission readiness," states corresponding author Sara Police, PhD, Department of Pharmacology and Nutritional Sciences, University of Kentucky College of Medicine, Lexington, KY, USA." Additional, relevant issues include the changing demographics of the military and food insecurity among military families."

The connection between the nation's health and national security was identified in 1946 when the National School Lunch Program was passed to address malnutrition among World War II military recruits. This was at a time when limited calories per day were available in the US food supply. Today, the concern for malnutrition is no longer as pressing. Instead, dramatic calorie enrichments to the food supply and increased portion sizes, among several other factors, have promoted weight gain and consequently reduced the number of otherwise eligible men and women for enlistment. The percentage of eligible recruits who exceed the military's percent body fat standards has doubled for men and tripled for women since 1960.

These statistics have prompted military leaders to call for changes in nutritional and dietary patterns, including initiatives in schools to remove less healthful food options and increase the use of free and reduced cost lunch programs. Another solution could be nutrition education within the armed services themselves.

"Drill sergeants are essential and important leaders in the armed forces for coaching, counseling, mentoring, and training new soldiers," explains Dr. Police. "This Perspective draws on previous studies illustrating that accurate nutrition information and behavior modeling could strongly influence recruits."

Co-author Nicole Ruppert, MS, Department of Pharmacology and Nutritional Sciences, University of Kentucky College of Medicine, notes, "Other leaders, including commanding officers and non-commissioned officers, also

play essential roles in information dissemination and behavior modeling and could have a continued impact on soldiers beyond basic training."

The changing demographics of today's basic training regiments include a greater percentage of women and racial/ethnic groups. These are groups of the population who experience a higher rate of obesity but also higher rates of food insecurity. Unreliable access to healthy food can lead to obesity as well as anxiety and other mental health issues, which further threaten military retention and mission readiness.

"Despite efforts by the US government and Department of Defense, obesity continues to impact the military and the risk to national security is great," stresses Dr. Police. "Research to uncover best practices will consider the increasing diversity within the armed forces, the importance of access to healthy food, and the opportunity to support nutrition education through informed leadership."

Notes for editors

The article is "The US Military's Battle With Obesity," by Sara B. Police, PhD, and Nicole Ruppert, MS (<https://doi.org/10.1016/j.jneb.2022.12.003>). It appears in the *Journal of Nutrition Education and Behavior*, volume 54, issue 5 (May 2022), published by [Elsevier](#).

The article is openly available at [https://www.jneb.org/article/S1499-4046\(21\)00953-2/fulltext](https://www.jneb.org/article/S1499-4046(21)00953-2/fulltext).

Full text of the article is also available to credentialed journalists upon request; contact Eileen Leahy at +1 732 238 3628 or jnebmmedia@elsevier.com to obtain a copy. To schedule an interview with the author(s), please contact Sara B. Police, PhD, at sara.police@uky.edu.

This research was supported by the Department of Pharmacology and Nutritional Sciences at the University of Kentucky College of Medicine.

An audio podcast featuring an interview with Sara B. Police, PhD, and other information for journalists are available at www.jneb.org/content/media. Excerpts from the podcast may be reproduced by the media with permission from Eileen Leahy.

About the Journal of Nutrition Education and Behavior (JNEB)

Advancing Research, Practice and Policy

The *Journal of Nutrition Education and Behavior* (JNEB), the official journal of the Society for Nutrition Education and Behavior (SNEB), is a refereed, scientific periodical that serves as a resource for all professionals with interest in nutrition education and dietary/physical activity behaviors. The purpose of JNEB is to document and disseminate original research, emerging issues, and practices relevant to nutrition education and behavior worldwide and to promote healthy, sustainable food choices. It supports the Society's efforts to disseminate innovative nutrition education strategies, and communicate information on food, nutrition, and health issues to students, professionals, policymakers, targeted audiences, and the public.

The *Journal of Nutrition Education and Behavior* features articles that provide new insights and useful findings related to nutrition education research, practice, and policy. The content areas of JNEB reflect the diverse interests of health, nutrition, education, Cooperative Extension, and other professionals working in areas related to nutrition education and behavior. As the Society's official journal, JNEB also includes policy statements, issue perspectives, and member communications. www.jneb.org

About Elsevier

As a global leader in information and analytics, [Elsevier](https://www.elsevier.com) helps researchers and healthcare professionals advance science and improve health outcomes for the benefit of society. We do this by facilitating insights and critical decision-making for customers across the global research and health ecosystems.

In everything we publish, we uphold the highest standards of quality and integrity. We bring that same rigor to our information analytics solutions for researchers, health professionals, institutions and funders.

Elsevier employs 8,700 people worldwide. We have supported the work of our research and health partners for more than 140 years. Growing from our roots in publishing, we offer knowledge and valuable analytics that help our users make breakthroughs and drive societal progress. Digital solutions such as [ScienceDirect](https://www.sciencedirect.com), [Scopus](https://www.scopus.com), [SciVal](https://www.scival.com), [ClinicalKey](https://www.clinicalkey.com) and [Sherpath](https://www.sherpath.com) support strategic [research management](#), [R&D performance](#), [clinical decision support](#), and [health education](#). Researchers and healthcare professionals rely on our over 2,700 digitized journals, including *The Lancet* and *Cell*; our over 43,000 eBook titles; and our iconic reference works, such as *Gray's Anatomy*. With the [Elsevier Foundation](#) and our external [Inclusion & Diversity Advisory Board](#), we work in partnership with diverse stakeholders to advance [inclusion and diversity](#) in science, research and healthcare in developing countries and around the world.

Elsevier is part of [RELX](https://www.relx.com), a global provider of information-based analytics and decision tools for professional and business customers. www.elsevier.com
