Adult food literacy program increases nutrition habits over time

Research published in the Journal of Nutrition Education and Behavior determined the effect of Food Sensations for Adults on food literacy behaviors and selected dietary behaviors

Philadelphia, September 11, 2023 – Improving food literacy positively influences diet quality and reduces the risk of chronic diseases; however, interpreting the evidence of its effectiveness has been limited. Results of a new study in the Journal of Nutrition Education and Behavior, published by Elsevier, found that Foodbank Western Australia’s Food Sensations for Adults (FSA) food literacy program is effective in producing positive changes across a range of food literacy and dietary behaviors in participants ages 18 and older.

Lead author Andrea Begley, DrPH, School of Population Health, Curtin University in Perth, Western Australia (WA), says, “Behavior change takes time to establish. Participants may be unable to change all food literacy and dietary behaviors quickly, so unsurprisingly, programs lasting more than five months were deemed the most effective.”

This study tested the effectiveness of the FSA with a quasi-experimental design. Data were collected at the start and end of the program. The control group was recruited from adult volunteers and staff at the Foodbank WA warehouse in Perth and at a Foodbank WA promotion stall during a public exposition from August to October 2020. The FSA facilitators administered preprogram and postprogram questionnaires using an evaluation protocol to maintain consistency and ethical requirements. One-hundred twenty-eight control group participants completed the preprogram questionnaire and 80 completed the postprogram questionnaire. These responses were matched with FSA program participants (62.5% matched data).
Dr. Begley explains, “We hypothesized that FSA program participants who completed at least 75% of the program would report statistically significant improvements in food literacy behaviors and fruit and vegetable intake.”

The FSA comprised four sessions of 150 minutes each. The curriculum was mapped out using the Australian Food Literacy and Context Model within four categories: planning and management, selection, preparation, and eating. All lesson content and resources were designed to be accessible to people with low literacy and were primarily pictorial.

While the FSA is a relatively short program, delivered over four weeks, researchers found it effective with demonstrated sustained behavioral change in line with other similar published programs.

The results indicated that the program group achieved statistically greater improvements in planning and management and preparation. The servings of vegetables significantly improved, as well. An increase in cooking confidence was measured, with improvements in other food literacy behaviors also noted.

Dr. Begley notes, “This study provides a valuable contribution to the literature to justify the funding of food literacy programs. The results are pertinent to government policymakers in decision-making for evidence-based public health investment.”
Notes for editors
The article is “Determining the Effectiveness of an Adult Food Literacy Program Using a Matched Control Group,” by Andrea Begley, DrPH; Isabelle Fisher, M.Diet; Lucy Butcher, PhD; Frances Foulkes-Taylor, M.Diet; Roslyn Giglia, PhD; and Satvinder S. Dhaliwal, PhD (https://doi.org/10.1016/j.jneb.2023.06.001). It appears in the Journal of Nutrition Education and Behavior, volume 55, issue 9 (September 2023), published by Elsevier.

Food Sensations for Adults is a free four-week food literacy program delivered by dietitians and nutritionists to adults from households with low- to middle-income who want to improve their food literacy. It was funded by the WA Department of Health and conducted by Foodbanks WA. This research was conducted as a partial requirement for the Master of Dietetics and funded by Curtin University, Perth, WA.

An audio podcast featuring an interview with Andrea Begley, DrPH, and other information for journalists are available at https://www.jneb.org/content/media. Excerpts from the podcast may be reproduced by the media with permission from Eileen Leahy.

About the Journal of Nutrition Education and Behavior (JNEB)
The Journal of Nutrition Education and Behavior (JNEB), the official journal of the Society for Nutrition Education and Behavior (SNEB), is a refereed, scientific periodical that serves as a resource for all professionals with an interest in nutrition education and dietary/physical activity behaviors. The purpose of JNEB is to document and disseminate original research, emerging issues, and practices relevant to nutrition education and behavior worldwide and to promote healthy, sustainable food choices. It supports the society's efforts to disseminate innovative nutrition education strategies, and communicate information on food, nutrition, and health issues to students, professionals, policy makers, targeted audiences, and the public.

The Journal of Nutrition Education and Behavior features articles that provide new insights and useful findings related to nutrition education research, practice, and policy. The content areas of JNEB reflect the diverse interests of health, nutrition, education, Cooperative Extension, and other professionals working in areas related to nutrition education and behavior. As the Society's official journal, JNEB also includes occasional policy statements, issue perspectives, and member communications. www.jneb.org

About Elsevier
As a global leader in information and analytics, Elsevier helps researchers and healthcare professionals advance science and improve health outcomes for the benefit of society. We do this by facilitating insights and critical decision-making for customers across the global research and health ecosystems.

In everything we publish, we uphold the highest standards of quality and integrity. We bring that same rigor to our information analytics solutions for researchers, academic leaders, funders, R&D-intensive corporations, doctors, and nurses.

Elsevier employs 9,000 people worldwide, including over 2,500 technologists. We have supported the work of our research and health partners for more than 140 years. Growing from our roots in publishing,
we offer knowledge and valuable analytics that help our users make breakthroughs and drive societal progress. Digital solutions such as ScienceDirect, Scopus, SciVal, ClinicalKey and Sherpath support strategic research management, R&D performance, clinical decision support, and health education. Researchers and healthcare professionals rely on over 2,800 journals, including The Lancet and Cell; 46,000+ eBook titles; and iconic reference works, such as Gray's Anatomy. With the Elsevier Foundation and our external Inclusion & Diversity Advisory Board, we work in partnership with diverse stakeholders to advance inclusion and diversity in science, research and healthcare in developing countries and around the world.

Elsevier is part of RELX, a global provider of information-based analytics and decision tools for professional and business customers.
